THE PROBLEM

Your agent already searches and compares.
It still can't pay safely.

A trapped page can make it pay. The payment is valid. Nobody wanted it.

THE SOLUTION

The agent asks. PayGuard decides and pays.

The agent never sees a key or a card number. Every decision is anchored on Avalanche. One kill switch stops everything.

LIVE DEMO

"Use PayGuard to buy me a NordSound ANC Pro headset at the best price, €60 max, pay by card."

Best price found. Scam rejected. Paid, with proof.

DOES IT HOLD UP OUTSIDE THE DEMO?

150 live phishing pages vs. 60 real shops

97 %

of phishing pages caught

0 %

of real shops blocked

Live phishing from OpenPhish, real shops from the Tranco top list. Unsure cases go to a human.

THE MARKET

Agents are about to spend trillions. Nobody guards the decision.

$1.5 T
agentic commerce by 2030 (Juniper)

10–25 %
of online sales made by agents by 2030 (Bain, Morgan Stanley)

#1
barrier to adoption: trust. Rails exist (Visa, Mastercard, Stripe). The decision layer does not.

BUSINESS MODEL

Pay per decision.

CREDITS

€10 = 200 decisions.

€0.05 each, the price of a fraud screening today.

OR A FEE ON WHAT IS PAID

0.5 % of each approved payment.

Below what fraud-guarantee platforms charge merchants.

LEGAL BY DESIGN

We never touch the money.
We prove the decision.

PSD2

Technical provider, never holds funds. Cards issued by a licensed issuer.

AI ACT

Human oversight on every held payment, full traceability of each decision.

DORA · AML

Tamper-proof audit log, recipient checks, spending caps, kill switch.

GDPR

Data minimisation: only a hash goes on-chain, no personal data on the ledger.
